## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-\*\* are rejected under 35 U.S.C. 103(a) as being unpatentable over FR 1 444 267, as cited by applicant, in view of Parker.

Regarding claim 1 FR '267 teaches a method and device for separating irregularly spaced and disordered piles of letters that are being transported on a conveyor belt, see figure 1. It would have been obvious to one of ordinary skill in the

FR '267 does not teach a retention plate and axis of rotation, but Parker does. Parker teaches a method and apparatus for organizing sheet materials into a continuous stream of sheets that are largely not lying on top of each other and are distributed homogeneously over the conveyor belt, see figure 1, the method and apparatus comprising rotating at least one retention plate, 34, affixed to an axis of rotation, 35, in a radial orientation with respect thereto around the axis of rotation that is arranged crosswise to a conveying direction of the conveyor belt, horizontally and above the conveyor belt in such a way that a retention plate situated below the axis of rotation has a speed component in a direction opposed to the conveying direction of the conveyor belt, see column 3 and 4.

It would have been obvious to one of ordinary skill in the art to substitute the retention plate and axis of rotation of Parker into the separating apparatus and method for FR '267 in order to achieve the predictable result of separating and organizing the pile of letters into a continuous stream of letters.

Regarding claim 2, Parker teaches several retention plates around the axis of rotation, see figure 3.

Regarding claim 3, the FR '267 reference teaches a curved conveyor belt, and therefore, the axis of rotation of Parker combined with the curved conveyor belt, would result in a distance between the axis and the belt that varies.

Regarding claim 4, Parker teaches that the angular distances between the retention plates are the same.

## Allowable Subject Matter

Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KAITLIN S. JOERGER whose telephone number is (571)272-6938. The examiner can normally be reached on Monday - Friday 9-5.

Application/Control Number: 10/564,304 Page 4

Art Unit: 3653

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Mackey can be reached on 571-272-6916. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
